

TITAN Water Alarm

OPERATING INSTRUCTIONS

Installing the battery: Remove the cover on the battery compartment located on the right side of the alarm. Extend the wires and snap a 9-volt battery onto the connector. Place the battery back in the compartment. Replace the cover.

Positioning the sensor: The sensor is located on the bottom of the alarm. The alarm can be placed directed on the floor with the sensor compartment closed, or the sensor compartment can be opened and the sensor wires extended to reach a sump pit or another remote location. The alarm can be hung on a nail or screw in the wall with the sensor extended, and the sensor can be secured in place through the holes in the sensor panel. Six feet of wire are attached to the sensor, but up to 100 ft. can be spliced into the line.

Replacing the battery: Replace the battery if the alarm has operated for an extended period of time, or if the battery expiration date is approaching. You may want to mark the battery expiration date on a piece of tape and attach it to the alarm when you install the battery.
